

Managed Security Services Dashboard

The managed security services team builds Intellectual property and work towards productizing managed security services for “go-to-market” jointly with New Commerce and Jio Enterprise teams. The dashboard attempts to measure all the steps being taken by this team and the value it is driving for its customers.

The **Left Side** is the Navigation bar which houses a number of buttons. The details of the buttons are as follows: -

- i. **Reset Button:** - It will reset all the filters selected on the page
- ii. **Hamburger Icon:** - This houses all the filters that can be applied to the data on the page. .
The filters that can be applied are as follows: -
 - a. **Time Range filter:** - This can be used to view the data between any date ranges.
Default view will be Last 1 week.
- iii. **Q&A Button:** - This helps the user to ask any question related to data to an AI powered Chat Bot. Figure 2 on the next page gives the preview of the same.
- iv. For the Six pages of the dashboard there is a navigation button which can help jump between the pages.

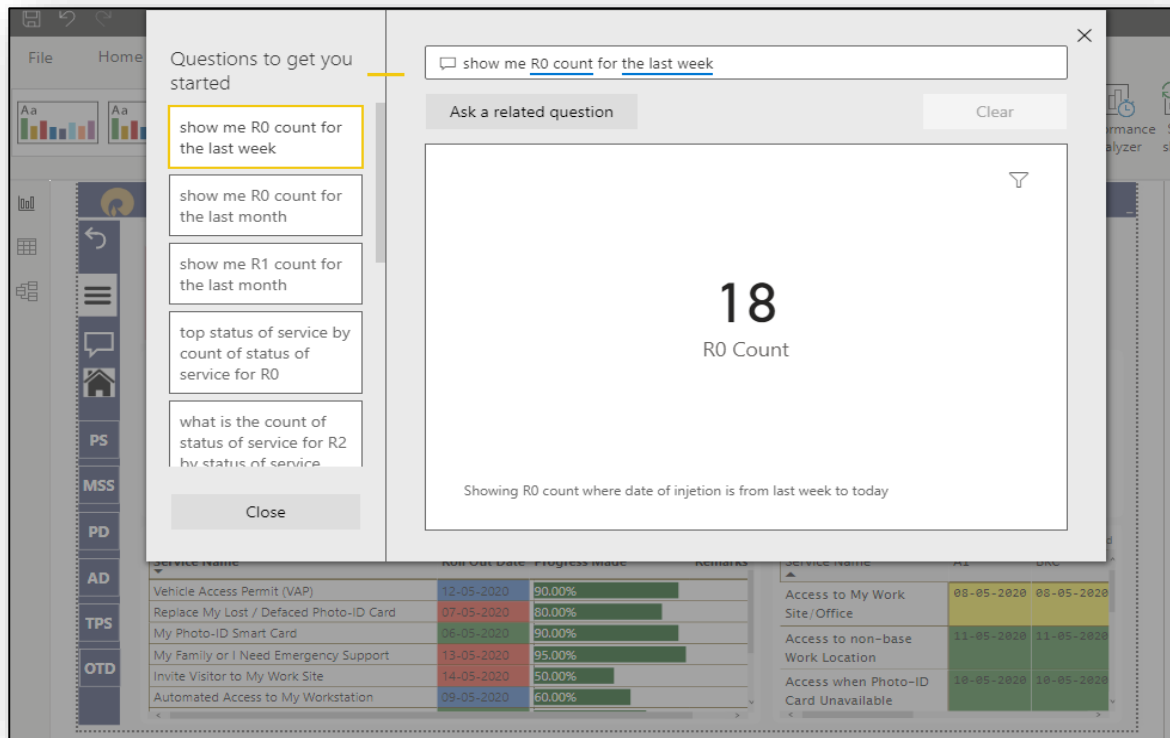

Figure 2 Q&A Pane

The **bottom** pane houses the delivery status of all the services. Each product/service in the MSS typically goes through 5 step process of Make & Operate model which are: -

- Product Design
- Product Engineering
- Development
- Prototype Testing
- Product/Service Signoff

Also each product can have various versions which goes through the same stages. The version might be the same product/service for a different set of users.

The delivery status is measured in terms of percentage completion of each step listed above for all the variants.

The **top** pane shows the aggregate status of all the services with the number of products as well.
